INTRODUCTION

This document is meant to be nothing more than the seed for academic discourse and exchange on an emerging topic – Agile Learning.

It doesn't aspire to be comprehensive, directional or final. Instead, it clarifies pertinent terms, lays out a concept, and attempts to stimulate conversation.

As such, it kicks off the BCIT Ed Talks 2020: Agile Learning dialogue.

With Ed Talks 2020, we will follow our proven path:

- (1) Pick and define a topic
- (2) Clarify terms and concepts, without being prescriptive
- (3) Gather community input in various formats, including town halls and Thought Exchange
- (4) Distil the prevalent themes into a draft document
- (5) Circulate the draft document and gather last-mile input
- (6) Infuse the last-mile updates into the final document
- (7) Publish

We know that the Ed Talks concepts resonates with the BCIT internal community. We recently looked at response rates for our various Thought Exchanges over the past three years and the top spots belong to Ed Talks 2017/18: Education Plan and Ed Talks 2019: Part-time Studies.

We hope that the educational interest will continue and Ed Talks 2020 will round out the Top 3.

Dr. Tom Roemer

Vice President Academic

CONTEXT

A Generational Shift

Currently, the BC workforce is made up of four generations: Baby Boomers, Gen-X, Millennials and Gen-Z. Over the next three years, the majority of the workforce will shift from the former two groups to the latter two.

- Appendix A provides an interesting breakdown of the four generations, their attitudes and behaviours, their preferred social environment, as well as their relationship with education and the labour market.

This new distribution brings with it changes in attitude, outlook and work-life balances. Given our mandate for provincial strategic workforce development, we cannot ignore these generational shifts if we want to stay effective, relevant and attractive.

The Effects of COVID-19

It appears that the COVID-19 crisis has not brought forward radically new behaviours and values; instead, it has accelerated and aggravated previously existing trends.

Many of these trends are established by Millennials and Gen-Z; they may be adopted or opposed by Boomers and Gen-X, but they cannot be ignored.

Some of the effects we observe are:

1. Baby boomers are retiring faster
2. Agile work environments evolve faster
3. New technologies see faster adoption
4. The service and retail industries change faster
5. PSE is becoming a global, flexible matrix (students & faculty)
6. Digital Transformation is happening everywhere

Before diving into Agile Learning, let's have a quick look at **Digital Transformation**.

Digital Transformation

Digital Transformation is the adoption of digital technology to transform businesses, services and life in general.

- It is important to recognize that in addition to efficiency via automation, digital solutions may enable new types of innovation and creativity, rather than simply enhancing and supporting traditional methods.

Industry (and with it society) have experienced disruptive technology changes, a.k.a. industrial revolutions, throughout history. So far, four industrial revolutions have been identified (based on the steam engine, electricity, automation, and interconnectivity), however a fifth revolution has already been suggested based on the advent of artificial intelligence (AI).

It is worth to note the accelerated speed of technology evolution and the shrinking time span between the associated industrial revolutions.

Digital Transformation

Industry 5.0

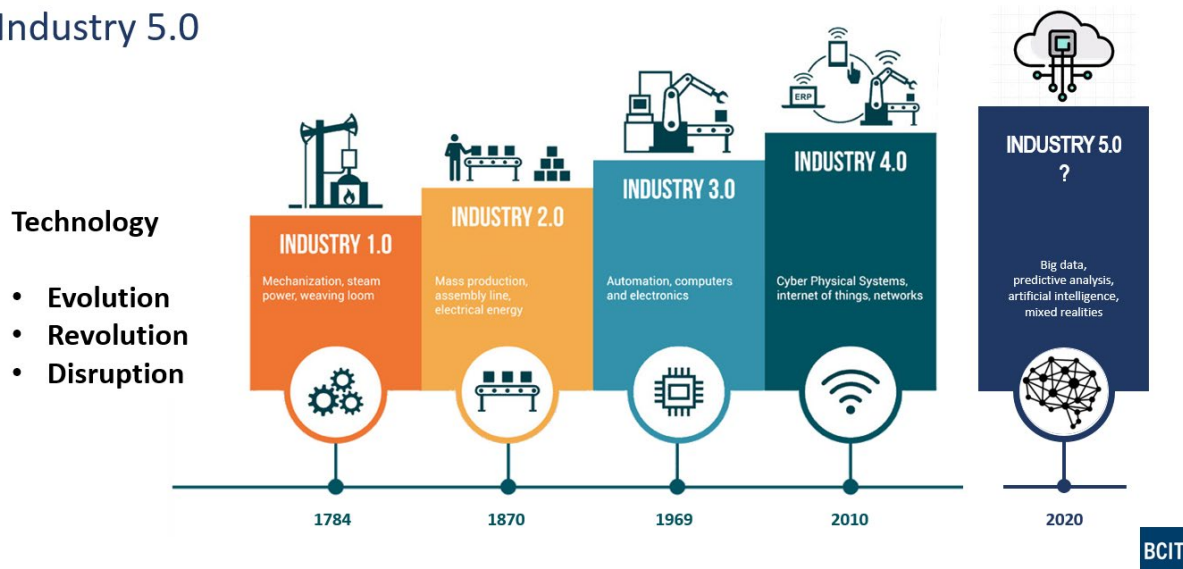

Figure 1: Industrial revolutions

Digital transformation will have a profound effect on how we live, work and play. And: how we learn and study.

AGILE LEARNING

At the outset, it is important to acknowledge that Agile Learning is not meant to replace our traditional and proven model of full-time cohort-based learning. Instead, it is a complement to address a new reality, an emerging group in the workforce.

Structurally, it belongs into the larger category of Enhanced and Flexible Learning, alongside the learning methodology support our Division of Education Support and Innovation (ESI) provides. One may say that within Enhanced and Flexible Learning, Agile Learning concentrates on the “what” rather than the “how”.

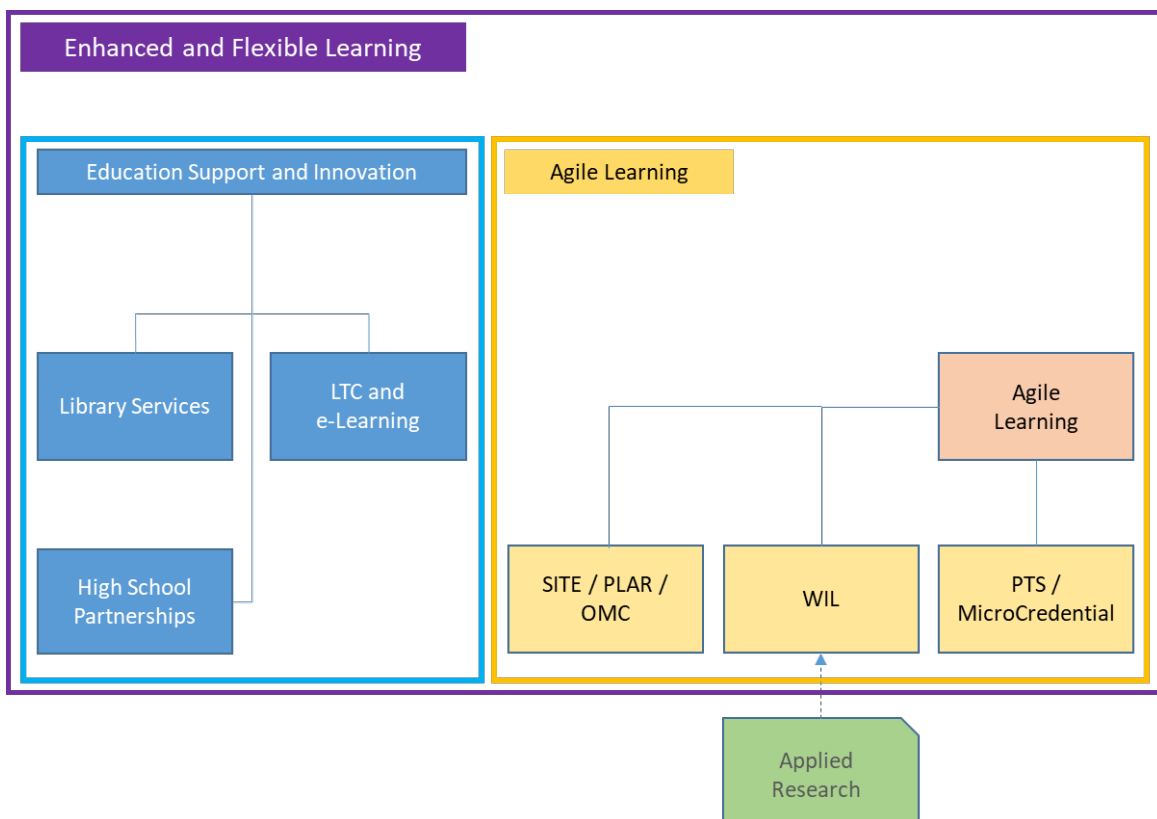

Figure 2: Agile Learning

Components

Various distinct components fit the Agile Learning definition. They are independent but can work in collaboration with each other.

Microcredentials and Badges

Microcredentials are short-cycle, flexible, competency-based learning experiences that demonstrate mastery of certain skills or competencies. They may be combined and stacked to earn full credentials.

Microcredentials fulfil the need of industry or individuals for a distinct skill in a concentrated and focussed way.

A **badge** is a digital icon representing an acknowledgment issued by an educational institution and validating successful demonstration of a distinct skill and competency.

- In our PTS model, a statement of completion is often issued to validate attendance and acquired competencies. The microcredential is a modification of that approach.

Education Council will be tasked with approving a framework for microcredentials, e.g. naming, issuance, the minimum and maximum number of credits and/or hours that form a badge or microcredentials, and the necessary quality control.

Open Multi-disciplinary Credentials (OMC)

Open multi-disciplinary credentials allow students the flexibility to combine credits from different disciplines and institutions into a recognized credential. It also offers the opportunity to recognize non-traditional forms of learning such as indigenous knowledge and workplace experience.

Prior Learning Assessment and Recognition (PLAR)

Prior learning assessment is a long-established practice to assess knowledge and competencies from external sources, and provide students with credit for academic work, an elevated academic standing or direct access to challenge an exam.

Knowledge and skills are assessed, course by course, by faculty members in the respective program area. PLAR may evaluate academic work from other jurisdictions or sources of non-traditional learning including volunteer work, work experience, or research projects.

Work-Integrated Learning (WIL)

Work-integrated Learning has become a central pillar of experiential learning. It has gained strong attention on the part of Governments and industry in an attempt to infuse more “real-life elements” and practical experience into post-secondary education. It may provide academic credit for structured job experience, and it is aimed at helping young people to make the school-to-work transition.

WIL can occur in different settings and models. Figure 3 illustrates the ten distinct types of WIL. Appendix B provides a more detailed description of the different forms of WIL.

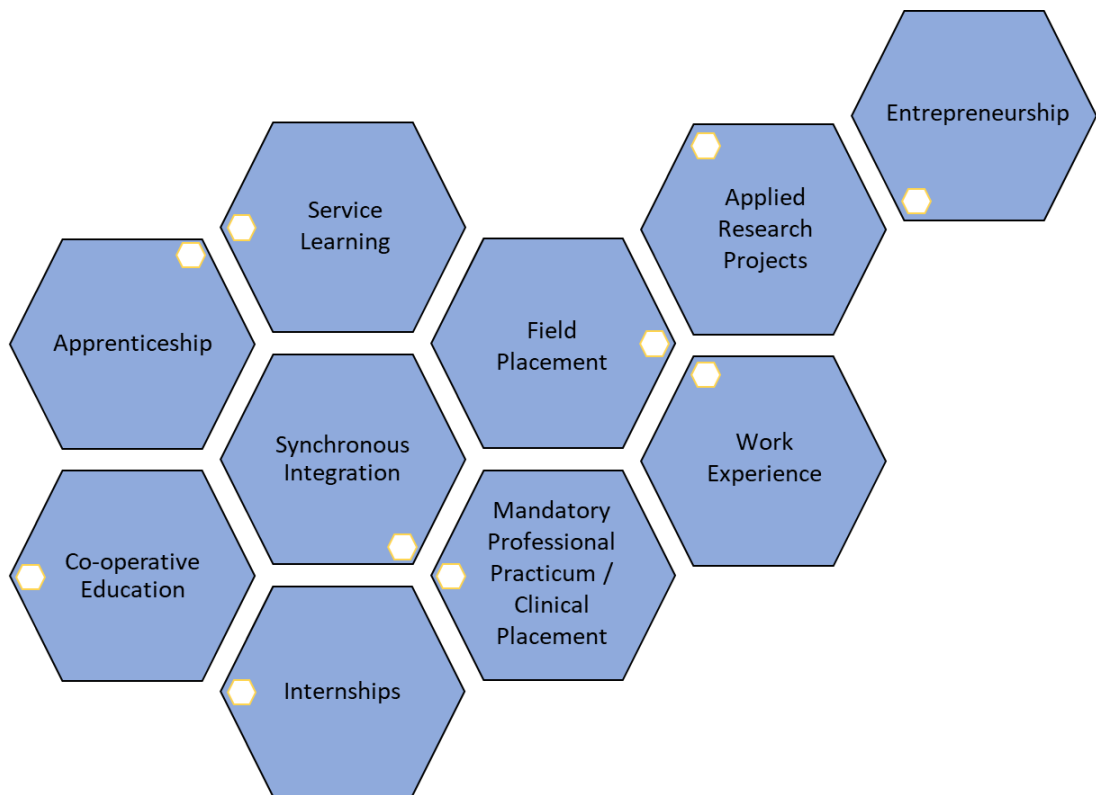

Figure 3: Forms of Work-integrated Learning (WIL).

Source: Based on a model developed at the University of Waterloo.

WIL and Agile Learning come together through defining the educational outcomes a placement may pursue. Figure 4 shows a matrix of prospective

outcomes. Of course, emphasis and ratio among the components will differ with each individual student and from placement host to placement host.

Expand Expertise	Information and data literacy	Technological literacy	Subject-matter knowledge / skills
Develop Self	Self-assessment	Self-management	Life-long learning & career development
Build Relationships	Communication	Collaboration	Social skills
Design and Implement Solutions	Critical thinking	Innovation mindset	Operationalization
Be a Global Citizen	Cross-cultural agility	Globalization	Business operations and logistics

Figure 4: Matrix of prospective shared outcomes in a broad implementation of WIL.

MICROCREDENTIALS

Overview

Microcredentials are gaining popularity across Canada as a means for validating competencies at a granular and modular level.

In the absence of standards, implementations in provincial jurisdictions differ but there is work underway to create a pan-Canadian framework. The following definition and guiding principles were developed by a national task force and they are broadly accepted as a basic common denominator on which additional articulation may be built.

Definition

A microcredential is a certification of assessed competencies that is additional, alternate, complementary to, or a component of formal qualification.

Guiding principles

1. Microcredentials are a complement to traditional credentials such as certificates, diplomas and degrees.
2. Microcredentials are subject to a robust and rigorous quality assurance process.
3. Microcredentials represent competencies identified by employers/industry sectors to meet employer needs.
4. A microcredential represent functional ability in one workplace competency.
5. Microcredentials clearly document how the competency was assessed.
6. Microcredentials are stackable, providing clear and seamless pathways across different credentials (both credit and non-credit)
7. Microcredentials are based on mastery of competency, not time spent learning.
8. Microcredentials are secure and portable.
9. Microcredentials are to follow institutional approval processes.

BCCAT Report on Microcredentials

In 2020, the BC Council for Admissions and Transfer (BCCAT) commissioned a research study into the current state of micro-credentialing.

The objectives of the scope of research were:

1. Identifying and reviewing current and emerging practices in developing and accepting microcredentials in admissions and transfer in British Columbia and elsewhere;
2. Assessing institutional perspectives on motivations, issues, and opportunities for developing and using microcredentials for admissions and transfer at post-secondary institutions in BC, Canada and beyond;
3. Exploring employer/ human resources staff perspectives on micro-credentials in the labour market, to the extent information is available and accessible; and
4. Identifying areas for future research and, if appropriate, the development of practices.

The results were released in November 2020 under the title “Micro-Credentials: Trends in Credit Transfer and Credentialing”, and the report answers many questions on the issue. A copy of the report is available on the BCIT Agile Learning website, or directly from BCCAT.

BCIT Thought Exchange

As part of the Ed Talks 2020 scholarly discourse, BCIT conducted a Thought Exchange on microcredentials in December 2020, which included students, faculty, staff and management at the Institute.

The Thought Exchange triggered a high level of student participation (almost one-half of all respondents), indicating a strong interest among this group.

Overall, there was a good balance of participation across the roles, which speaks to a fair representation of the collective thinking. 61% of the participants had prior knowledge of the concept of microcredentials.

Participation

- What is your primary role at BCIT?

%	Person Icon	Role
5%	(11)	Administrative - non-academic
6%	(15)	Administration - academic
36%	(85)	Faculty
0%	(0)	Logistics
4%	(9)	Management - academic
3%	(7)	Management non-academic
46%	(109)	Student

- Prior to this idea sharing event, were you familiar with these concepts?

%	Person Icon	Response
61%	(140)	Yes
39%	(89)	No

General Results and Themes

The Exchange was engaged and positive, with a clear validation of the concept. It showed high average ratings across all themes and a tight clustering of like-minded participants.

There were two primary blocks of posts – 85% of the participants offered supportive thoughts and comments, while 15% were critical and suspicious of the concept.

As to be expected, questions on quality and content dominated the exchange. Pertinent themes identified during the Thought Exchange were:

Evidence

- How much research has gone into this concept?
- It is important to define the terminology clearly and concisely.

Industry Appeal

- Industry will be in favour of the agility and responsiveness to their needs.
- Conversely, they may neither value nor understand the credential.
- Universal agreement that industry needs to be educated and involved in the development process.

Credential

- What is the exact definition of a BCIT microcredential?
- How granular do we want to get, how comprehensive?
- What is the true value?
- Could microcredentials erode our existing credentials?
- Could microcredentials lead to a drop in quality?

Administration

- Is our system agile enough to handle this new concept?
- How will implementation be managed?

Marketing

- There is a critical need to educate the public to maintain the integrity of the BCIT brand.
- Acknowledgement that this will be a competitive market very soon.

Ratings

The participants in the Microcredential Thought Exchange provided almost 4,200 ratings.

While there were few posts asking about the evidence behind the concept of microcredentials, these were the highest-rated. This speaks to the audience still being unclear on the concept itself and related industry trends. This includes the relationship of microcredentials to online learning on one hand, and our PTS offerings on the other. Appendix C offers the posted thoughts in a verbatim and comparative format.

The question on how to package a potential BCIT microcredential and take it to market drew a lot of interest, as did the question about the necessary administration. Red tape remains an issue at BCIT, and thoughts that questioned our operational agility and ability to address the necessary administrative change found significant agreement.

Thoughts around industry appeal were split. While approximately 60% of the raters agreed that it would be advantageous to employers, 40% expressed concerns to the opposite, mainly due to lack of value, evidence and a broad understanding of the concept.

Next Steps

Based on the strong albeit cautious support, we will establish a task force to develop a draft framework for a BCIT microcredential. Once in draft, this framework will be disseminated for discussion and final endorsement by Education Council.

An Agile Learning division could be tasked with tackling the administrative questions and putting into place a robust process for design, marketing and credentialing.

APPENDIX A: GENERATIONS IN THE WORKFORCE

				
Generation	Boomers 1946-1964	Gen-X 1965-1980	Millennials 1981-1996	Gen-Z 1997-2012
Workforce Share (2019)	21%	32%	33%	13%
Demographic	Prospects High-school Grads Upgraders Career Changers Retirees	Prospects High-school Grads Upgraders Career Changers Retirees	Prospects High-school Grads Upgraders Career Changers Retirees	Prospects High-school Grads Upgraders Career Changers Retirees
Education Focus	Co-skilling	Re-skilling	Up-skilling	Mid-skilling
Career through...	Time & credential	Versatility	Risk-taking	TBD
View of Education	A birthright	A way to get there	A massive expense	Anytime, anywhere
Social Environment	Radicals of the 70s and Yuppies of the 80s who were promised the North American Dream	Taking care of themselves, they watched politicians lie and parents get laid off	Hoping to turn the world around, they grew up more sheltered but often with working moms or divorce	Pragmatic attitude towards money and society amidst a polluted planet and social emancipation
Raised by	Traditionalists	Traditionalists Boomers	Boomers, Gen-X	Gen-X, Millennials
Relationship to Work	Workaholic for security	Work smarter for results	Work-life balance	Work-life blend

				
Generation	Boomers 1946-1964	Gen-X 1965-1980	Millennials 1981-1996	Gen-Z 1997-2012
Workforce Share (2019)	21%	32%	33%	13%
Core Value	Success	Time	Individuality	Sustainability
Motivation	Money & fame	Tasks & results	Teams/networks	Global issues
Focus	Relationships	Freedom & time off	Bright teams	Woke teams
Preferred Work Environment	Flat hierarchy Democratic Equality	Functional & flexible Access to information Access to leadership	Positive & collaborative Creative & diverse Constant feedback	Fast & convenient Socially engaged Connected
Motivation	Valued & needed Money "You are an asset!"	Removal of rules Freedom "Do it your way!"	Bright teams Time off "Try it and have fun!"	Woke teams Tangible change "Making a difference"
Work Liabilities	Expect workaholics Dislike conflict Process-oriented	Cynical / skeptical Dislike rigid rules Mistrust institutions	High expectations Dislike authority Impatient	Expectations of impact Social media 8 seconds to assess
Relationship w/ Technology	Acquired	Assimilated	Integral	Innate
Communication	Diplomatic In-person / phone Present options	Blunt & direct By e-mail Don't micro-manage	Frequent Internet Provide feedback	Constant Social media Provide feedback

APPENDIX B: FORMS OF WORK-INTEGRATED LEARNING (WIL)

Synchronous Integration

In a synchronous integration model, the student is employed full-time and goes to school as part of this employment. There often is a strong collaboration between employer and academic institution. For example, a technical institute may collaborate with a local manufacturer through shared applied research, educational appointments of industry practitioners and joint planning including human resources and financial investments.

Apprenticeships

Apprenticeship models differ from country to country. The Canadian model of apprenticeships currently is limited to the industrial trades. Here, the apprentice is indentured with an employer (sponsor) and is introduced to the industrial sector. Every year the apprentice visits a registered trades school (usually 6-8 weeks) and receives training towards a more advanced level. The apprentice then returns to the sponsor and practices the newly gained skills. This cycle is repeated four times until the apprentice is ready to graduate as a journeyman.

Other countries such as Germany may offer apprenticeships in areas other than the industrial trades (a.k.a. the *dual system*).

Co-operative Education

In cooperative (“co-op”) learning models, students alternate a school term with a work term in a structured manner, involving a partnership between the academic institution and the employer. It generally is both paid and intended to advance the education of the student through exposure to practice. Many institutions coordinate co-op placements through a dedicated department. The *co-op host* often covers an agreed-upon range of topics, and students receive a grade (and thus academic credit) for their performance. Often the students are paid a modest salary.

In Canada, the number of required work terms varies by program; however, the time spent in work terms must be at least 30% of the time spent in academic study for programs over 2 years in length and 25% of time for programs 2 years and shorter.

Internship

Internships are similar to co-op placements but normally occur only one time, in a less structured manner and towards the end of a course of study. This may result in more flexibility for students. Internships can be paid or unpaid, shorter in length, and the range of topics may be less defined. Grades and quality assurance visits by coordinators or faculty are less common than among co-op programs.

Service Learning

Service learning refers to learning that actively involves students in a wide range of experiences, which often benefit others and the community, while also advancing the goals of a given curriculum.

Community-based service activities are paired with structured preparation and student reflection. Desired outcomes are a deeper understanding of the course/curricular content, a broader appreciation of the discipline and an enhanced sense of civic responsibility. Service learning may also occur in a foreign country, often through involvement with an NGO.

Mandatory Professional Practicum / Clinical Placement

Mandatory Professional Practicum/Clinical Placement involves work experience under the supervision of an experienced registered or licensed professional (e.g. preceptor) in any discipline that requires practice-based work experience for professional licensure or certification.

Practica are generally unpaid and, as the work is done in a supervised setting, typically students do not have their own workload/caseload. Passing the practicum is a mandatory requirement for further advancement in the program. Conversely, failing a practicum, e.g. by exhibiting unsafe practice, may result in removal from the program.

Field Placement

Field Placement provides students with an intensive part-time/short term intensive hands-on practical experience in a setting relevant to their subject of study.

Field placements may not require supervision by a registered or licensed professional and the completed work experience hours are not required for professional certification and academic credit.

Field placements account for work-integrated educational experiences not encompassed by other forms, such as co-op, clinic, practicum, and internship.

Work Experience

Work Experience intersperses one or two work terms (typically full-time) into an academic program, where work terms provide experience in a workplace setting related to the student's field of study and/or career goals.

Applied Research

Applied Research students are engaged in research that occurs primarily in workplaces, including consulting projects, design projects, and community-based research projects.

The experience may also be offered at the institution, provided that there is sufficient separation between the instructional component and the applied research project.

Entrepreneurship

Entrepreneurship allows a student to leverage resources, space, mentorship and/or funding to engage in the early-stage development of business start-ups and/or to advance external ideas that address real-world needs for academic credit.

Entrepreneurship projects are often located at incubation centres and accelerator hubs, and provide students with exposure to the real-world interaction of funding, development, marketing and sales.

APPENDIX C: MICROCREDENTIAL THOUGHT EXCHANGE

Microcredentials and Online Delivery

Difference: 6. Micro Credentials | Online Delivery [32 | 30] 10 differences found

RESULTS

Side A

How would one register for 0.5 credits of a 3 credit course? This sounds like a logistical nightmare for Registrations and Records staff

★ 4.6 ★ 1.4

Micro-credentials represent a cursory familiarity with a topic, but suggest a lack of in-depth subject matter knowledge. Adoption of micro-credentials or 'badges' will devalue industry perception of existing BCIT program credentials, to the detriment of prior graduates.

★ 4.6 ★ 1.4

Just stop It's a fad, don't teach fads

★ 3.9 ★ 1.5

Don't give away our classes for free! BCIT alum have paid for quality education. Please maintain this quality.

★ 4.3 ★ 1.9

We need specialists for our complex world. Micro credentials could act against. Generations are different. However, I am teaching young students. I also have sons of similar age. I do not see a difference with respect to values.

★ 4.6 ★ 1.7

"Agile learning" is not new concept. Micro credentials could go against robust learning. "micro credentials" prevent learning in depth of a subject. BCIT lack of flexibility needs to be addressed. However, micro credentials could water down our programs.

★ 3.7 ★ 2.0

Side B

Online delivery removes the fluff of a normal classroom environment. Modern education needs to get the bottom line. Too much time is wasted on procedure. Online delivery allows a 4 month semester to be reduced to 1. Shorter; agile learning is only natural

★ 2.0 ★ 4.4

Side A/B Common (high)

Rigorous quality assessment. Even for microcredentials there need to be an assessment of quality of course content, teaching faculty and program structure

★ 4.4 ★ 4.5

How will BCIT train the teacher for this new era? BCIT has an excellent teaching platform, but few teachers exploit it correctly. The job market evaluates the student. I've heard that before. Taking an online course sounds easy, but it isn't.

★ 4.6 ★ 4.6

Quality will be key. Especially in the early stages. First impressions and our reputation will make or break this venture. I hope that we invest accordingly (manpower, time, and money), especially in the first round of courses we launch.

★ 4.3 ★ 4.5

Make sure the BCIT quality standards are in tact. Want to keep our reputation with industry and the job market.

★ 4.4 ★ 4.3

We need more support for e-learning, for this to succeed. e-learning will be the engine of anything "agile". For the concept to work, we need to make sure the engine is running at full capacity.

★ 4.1 ★ 4.9

Quality Assurance. Even a 0.5 credit course should be of high quality and be approved by School Quality Committee in order to maintain BCIT's education standard

★ 4.0 ★ 3.9

Microcredentials and PTS Courses

Difference:

5. Pts Courses | Micro Credentials [44 | 22]

10 differences found

RESULTS

Side A

Cost Needs funding

★ 3.9 ★ 1.2

Who will do the administration? Who will be responsible for doing all the administrative work? PTS program assistants are already carrying a very heavy workload

★ 4.2 ★ 1.6

If badges show competencies, and I wanted to be competent at creating business plans, which parts of which courses would I take to become competent? Many courses mention business plan as an outcome. Who will do the advising+course organizing+evaluation to ensure that I am competent once complete?

★ 4.3 ★ 2.0

I don't really understand the model yet. I'd like to hear some ideas or examples of what this will look like when we implement it in the new year. What would a micro-course look like? How would a course or even a program be broken-down? I need ideas so I can start thinking about my program.

★ 4.5 ★ 2.4

Clear definition It is important to clearly define a microcredential and the difference with our other PTS courses (for students, BCIT and employers)

★ 4.3 ★ 2.5

There are already a lot of established MOOC courses that offer microcredentials. Most of these are purely asynchronous. Taking our COVID lessons, we may want to offer these courses, still online, but in a hybrid sync/asynchronous model. It may set us apart from the pack.

★ 4.2 ★ 2.3

We need to treat PTS instructors fairly If the future of learning is flexible, we cannot continue to treat the faculty who deliver these programs as second class citizens

★ 4.1 ★ 2.6

Show more +

Side B

Micro credentials may diminish skill level rather than increase it as employers can employ graduates with just enough skills Graduates need wide breadth of skills and knowledge to adapt and adjust to an ever changing market and set of challenges.

★ 1.7 ★ 4.1

Side A/B Common (high)

We need more support for e-learning. for this to succeed. e-learning will be the engine of anything "agile". For the concept to work, we need to make sure the engine is running at full capacity.

★ 4.5 ★ 4.7

Make sure the BCIT quality standards are in tact Want to keep our reputation with industry and the job market.

★ 4.7 ★ 3.5

Quality will be key. Especially in the early stages. First impressions and our reputation will make or break this venture. I hope that we invest accordingly (manpower, time, and money), especially in the first round of courses we launch.

★ 4.5 ★ 3.4

How will BCIT train the teacher for this new era? BCIT has an excellent teaching platform, but few teachers exploit it correctly. The job market evaluates the student. I've heard that before. Taking an online course sounds easy, but it isn't.

★ 4.8 ★ 4.9

Fix online part-time studies courses first before launching new concepts. PTS students are suffering w/ poorly managed transition to online learning. Many instructors already struggle to use D2L and online tools effectively. How about some better training to support existing students/faculty?

★ 4.7 ★ 4.5
