Biomedical Engineering Technology Physical Requirements Form BEng #1

Biomedical Engineering is physically demanding profession. It requires stamina and good physical strength, especially in the upper body, arm, shoulder and back.

Biomedical Engineering Technologists must be able to:

- Exert fine motor control
- Differentiate colors and distinguish sounds
- Work in an environment that contains latex and other chemicals that may provoke sensitivity reactions
- Function in busy, often stressful environments

I am aware of the physical requirements for Biomedical Engineering Technology program. I confirm that I possess the physical strength and attributes to perform these functions.

I also understand that, once I have been provisionally accepted, I will be required to complete an immunization form. The British Columbia Health Authorities require students to be fully immunized in order to go out to their clinical practicum. I understand that failure to complete this form will prevent me from attending the Biomedical Engineering Technology Program. The Immunization form is available for my review on the Biomedical Engineering web site.
