

CLINICAL PLACEMENT FORM

With the assistance of our clinical partner sites, the BCIT Cardiovascular Perfusion program uses clinical facilities for practical placements during the clinical year.

These sites include:

BC Children's Hospital (Vancouver, BC)
Foothills Medical Centre (Calgary, AB)
Kelowna General Hospital (Kelowna, BC)
Mazankowski Alberta Heart Institute (Edmonton, AB)
Royal Columbian Hospital (New Westminster, BC)
Royal Jubilee Hospital (Victoria, BC)
St. Boniface Hospital (Winnipeg, MB)
St. Paul's Hospital (Vancouver, BC)
Vancouver General Hospital (Vancouver, BC)

Students must travel and make arrangements for accommodation in out-of-town sites according to the length of each rotation. The duration of the clinical courses are two and three weeks (two courses), and 14 weeks (three courses). Complete clinical schedules will be available to students three months prior to beginning the clinical year.

Clinical site rotations are assigned to students by BCIT faculty. Although student input is used for site assignments, **there is no guarantee that all learners will receive their preferred placements.**

I confirm that I have read and understood the above information regarding clinical placements.
